EDUCATION

Rutgers, The State University of New Jersey — New Brunswick, NJ — Expected May 2027
B.S., Double Major: Computer Science & Data Science — GPA: 3.33/4.0

Relevant Coursework: Data Structures, Computer Architecture, Design & Analysis of Algorithms, Data Management for Data Science, Database Management, Machine Learning Principles, Systems Programming, Linear Algebra

WORK EXPERIENCE

Lockheed Martin — Rotary and Mission Systems — Aug. 2026 – Present
Software Engineering Intern, ECIW · Remote

- Developed and maintained system infrastructure components supporting mission-critical software performance and reliability.
- Automated infrastructure services, provisioning, and network configuration using **Ansible**, PyYAML, and custom **Python** scripts, streamlining deployment and eliminating manual setup across diverse systems and environments.
- Supported the migration of virtualized infrastructure from **Red Hat Virtualization** to **OpenShift Virtualization**.
- Developed Python scripts and an automated **STIG hardening** pipeline enforcing **DISA** security compliance across **RHEL** and Linux systems, with regression testing playbooks confirming reliability after each configuration change.
- Deployed and managed containerized services using **Docker** and **Kubernetes**, including image builds and orchestration.

Lockheed Martin — Rotary and Mission Systems — May – Aug. 2026
Software Engineering Intern, SEMS · King of Prussia, PA

- Programmed low-level system software in **C++** for an **Inertial Measurement Unit (IMU)**, implementing sensor data acquisition and device-level hardware interfaces to enable accurate, real-time navigation in **GPS-denied environments**.
- Designed and coded simulations of the IMU system in **MATLAB** and **Python** to model sensor behavior, test edge cases, and validate navigation accuracy across operating, environmental, and fault conditions.
- Collaborated with cross-functional teams on classified defense projects in a secure, compartmented environment.
- Operated in an **Agile/Scrum** environment, tracking work in Jira and documentation in Confluence across the Atlassian suite.
- Served as **Scrum Master** for the intern project team, creating, assigning, and closing tickets throughout each sprint.

Rutgers Office of Career Exploration — Jan. 2025 – Dec. 2026
FIGS Peer Instructor · New Brunswick, NJ

- Competitively selected to design and deliver a First-Year Interest Group Seminar on Computer Science to **23 students**.
- Led an engaging classroom by facilitating weekly discussions, structuring lesson plans and in-class activities, and adapting teaching strategies to a wide range of student learning styles and backgrounds.
- Held **weekly meetings** with fellow peer instructors to align curriculum across sections and coordinate scheduling, and participated in **interviewing** and selecting incoming instructor candidates.

PROJECTS

Stigsmith — Automated STIG Remediation · C# / .NET

- Built a **.NET 10 / C# 14** service that ingests **SCAP** scan results and **DISA STIG** checklists (`.ckl`, `.cklb`, XCCDF, ARF), classifies which findings are automatable, and drafts **Ansible** remediation from each rule's prescribed fix text with a locally hosted **LLM** (**Ollama**) so air-gapped environments stay offline, then validates every playbook by linting it, applying it in a disposable **Docker** container, re-scanning to confirm the fix, and re-applying to prove **idempotency**, all on an **ASP.NET Core** API with background job queues, **SignalR** streaming, and evidence stored in **PostgreSQL** via **EF Core**.

Terminal Bullet Chess · C++

- Built a two-player online bullet chess game in **C++17**: a **bitboard** move generator covering castling, en passant, promotion, and checkmate, stalemate, threefold-repetition, 50-move, and insufficient-material detection; a **multithreaded TCP server** that pairs players into game rooms, runs a handler thread per player plus a timer thread, and validates every move server-side; and an ANSI terminal client with Unicode pieces, live increment clocks, and move history.

Wordle Clone · Java

- Developed an interactive Wordle clone in **Java Swing**: a 6x5 grid of key-listener-driven text fields with per-letter green/yellow/gray feedback, repeat-letter guards, win and loss dialogs, and one-click reset into a fresh round, split into separate game-logic and UI classes.

TECHNICAL SKILLS

Languages	Python, C/C++, C#, Java, SQL, Bash, YAML, R, MATLAB
Infrastructure	Linux, RHEL, Docker, Kubernetes, OpenShift, Ansible, Git, GitHub, CI/CD
Backend & Data	.NET, ASP.NET Core, EF Core, SignalR, PostgreSQL, MySQL, NumPy, Pandas, Apache Spark, Jupyter, Ollama
Practices	Agile, Scrum, STIG/SCAP Security Hardening, Containerization, Networking, Unit Testing, LLM Integration

CERTIFICATIONS & CLEARANCE

- **Active Top Secret Security Clearance** — U.S. Department of Defense
- **CompTIA Security+** — In Progress
